mechanism is moulded on the guide rail, the guide rail consisting at least in part of plastics.

2. (Amended) The system according to claim 1 wherein at least one supporting structural part of the window lifter serves at the same time to hold a functional element of the closing mechanism.
3. (Amended) The system according to claim 1 or 2 wherein at least a part of the closing mechanism forms a prefabricated structural unit with the drive unit of the window lifter.
4. (Amended) The system according to claim 3 wherein a base plate for holding the drive unit forms a prefabricated structural unit with the guide rail.
5. (Amended) The system according to claim 4 wherein the base plate is moulded in one piece on the guide rail.
6. (Twice amended) The system according to claim 1 wherein a part of the closing mechanism which forms a structural unit with a structural group of the window lifter comprises at least one of the group of structural elements consisting of:
a socket for a door lock,
(a door lock),
a socket for a door outside handle,
a door outside handle,
a socket for a door inside handle, and
(a door inside handle).
7. (Amended) The system according to claim 6 wherein the part of the closing mechanism is the socket for the door lock and wherein the socket for the door lock forms a prefabricated structural unit with a base plate for the drive unit.
8. (Twice amended) The system according to claim 3, further comprising a socket for a door outside handle, the socket

forming a prefabricated structural unit with the guide rail, wherein the window lifter is an outer window lifter.

9. (Twice amended) The system according to claim 3 further comprising a socket for a door inside handle, the socket forming a prefabricated structural unit with the guide rail wherein the window lifter is an inner window lifter.
10. (Twice amended) The system according to claim 3 wherein the window lifter is formed as a double-strand cable window lifter having two guide rails running side by side and wherein a socket for a door lock and a socket for a door outside handle form a prefabricated structural unit with the guide rail of the window lifter on a B-pillar side.
11. (Twice amended) The system according to claim 3 wherein a socket for a door lock is connected to a socket for a door outside handle and the socket for the door outside handle is connected additionally to the guide rail.
12. (Twice amended) The system according to claim 3 wherein a door lock and a door outside handle holder are fixed on the guide rail through a common support.
13. (Twice amended) ^{5/3/1} The system according to claim 5 wherein ^{the} functional element of the closing mechanism is prefitted on an associated holding element.
14. (Twice amended) The system according to claim 3 wherein the guide rail of the window lifter is formed for displaceable bearing on the supporting plate.
15. (Twice amended) The system according to claim 3 wherein the guide rail is displaceable on the supporting plate along (a) longitudinal direction of the vehicle.
